A Guide to Pedestrians Safety Solutions

- Low Cost Solar
- Energy Efficient
- Wireless Communication
- Low or No Maintenance
- High Visibility
- MUTCD Compliant

We have created this as a guide to help aid in your planning for improvements to pedestrian safety. Higher speed traffic, mid-block crosswalks and intersections can cause issues for drivers and pedestrians when not well marked or illuminated.
A Guide to Pedestrians Safety Solutions
Low Cost Solar • Energy Efficient • Wireless Communication • Low or No Maintenance • High Visibility • MUTCD Compliant

Solution 1:
Solar-Powered Pedestrian BlinkerSign® LED Warning System
This is a low cost alternative to installing traffic signals. Energy efficient flashing LEDs will alert drivers to the presence of the pedestrians when activated. A variety of activation options are available to fit each situation.

Solution 2:
Ring of Fire LED
Poorly lit sidewalks, paths and walkways can be hazardous to pedestrians. This energy efficient luminaire is perfect for promoting high visibility for safety and security. We carry a large selection of poles, bases, brackets and accessories that will coordinate with this decorative look.

Solution 3:
Rectangular Rapid Flash Beacon: RRFB-XL2™
This solar-powered, eco friendly solution increases driver awareness up to 90% at high-risk crossings. Features include easy installation, highly visible synchronized wireless XL LEDs and easy maintenance with a modular replacement design.

Solution 4:
BlinkerBeacon™ Solar LED Beacon
Solar LED Beacons are traditionally used for enhancing a pedestrian crossing. Available in single and double beacon with various activation options including time clock and push button.

Solution 5:
Driver Feedback Signs
This system will call attention to the reduced speed, as well as alert drivers to their speed encouraging the drivers to slow down.

Solution 6:
In-Pavement LED Warning Lights
In-pavement warning lights alert motorists to the presence of a pedestrian crossing or preparing to cross the street. The LED markers produce a bright, daytime-visible light focused directly in the driver’s line of sight.
